SUMMARY

Senior-oriented full-stack developer who designs responsive user interfaces, secure backend-connected workflows, and maintainable production features for client-facing systems. Proven record delivering modern ecommerce capabilities, troubleshooting across the stack, automating manual workflows, and applying AI-assisted development to improve business outcomes. Comfortable working independently in remote or distributed settings while collaborating with product, design, client, and engineering stakeholders.

TECHNICAL SKILLS

Frontend

React, React Native, TypeScript, JavaScript, HTML5, CSS3, SCSS, Tailwind CSS, jQuery, responsive UI development

Backend & APIs

C#, .NET Core, ASP.NET, Node.js, Python, REST APIs, JSON, SQL Server, MSSQL, integration workflows

CMS & Ecommerce

Optimizely (EpiServer) CMS/Commerce, BigCommerce, BigCommerce B2B, Shopify, WordPress, custom checkout solutions

Cloud, Delivery & Practices

DigitalOcean, Linux, LAMP, Git, GitHub, CI/CD pipelines, Agile/Scrum, production deployments, performance and security tuning

AI & Automation

OpenAI integrations, prompt/API orchestration, product content automation, Python scripting, JSON-based configuration automation

Collaboration

Technical planning, code review participation, cross-functional communication, client-facing delivery, production support

SELECTED PORTFOLIO HIGHLIGHTS

React Native Fitness App CURRENT SIDE PROJECT

Designing a cross-platform TypeScript application around structured workouts, cloud-backed data, reusable mobile UI patterns, and future AI coaching workflows.

AI-Enabled Product Feed System PROFESSIONAL PROJECT

Built an OpenAI-powered catalog content workflow that automates product feed generation and improves scalability for ecommerce catalog management.

Modern Portfolio Platform VITE, REACT, TYPESCRIPT, TAILWIND CSS

Maintains a component-driven portfolio with structured bilingual content, project archives, production capability sections, and interactive JavaScript demos.

PROFESSIONAL EXPERIENCE

Developer May 2022 - Present

Brilliance Business Solutions

- Develop and maintain enterprise Optimizely (EpiServer) ecommerce websites using .NET Core, C#, and MSSQL in high-traffic production environments.
- Build modern, responsive storefront experiences and BigCommerce themes with JavaScript, HTML, CSS, jQuery, React, and TypeScript.
- Develop customized BigCommerce Checkout and B2B portal solutions that support advanced account-based workflows and client-specific purchasing requirements.
- Led the company's first custom BigCommerce Checkout implementation, expanding platform capabilities and enabling new revenue opportunities.
- Deliver API-connected commerce features and third-party integrations, including payment workflows, analytics, consent, security, and customer communication capabilities.
- Support performance, reliability, and maintainability through production troubleshooting, framework modernization, technical planning, and cross-functional collaboration.
- Built an OpenAI-powered product feed system that automates product content generation and improves the scalability of ecommerce catalog management.

Software Implementation Specialist June 2021 - May 2022

Orvis V - Johnson & Johnson Contract

- Collaborated with cross-functional stakeholders to deliver electronic forms that streamlined pharmaceutical documentation workflows.
- Analyzed new system features and planned their implementation across existing electronic forms by coordinating with implementation teams and functional areas.
- Developed Python automation scripts for JSON-based form configuration, reducing manual setup time by approximately 50-70% while minimizing configuration errors.
- Reviewed and edited procedure documents as new system capabilities, controls, and processes were implemented.
- Tested electronic forms to confirm process flow accuracy and correct configuration of required controls.

Freelance Software Developer January 2021 - December 2021

Independent

- Designed and deployed WordPress websites with end-to-end implementation, SEO optimization, security hardening, and performance tuning.
- Created a reusable WordPress plugin stack covering SEO, security, backup and restore, and speed optimization needs for small business sites.
- Deployed cloud-hosted applications on DigitalOcean while managing Linux servers and LAMP stack configurations.
- Authored technical blog posts for csvcode.com and finxter.com.

Technology Analyst January 2021 - December 2021

Scientia Naturam

- Researched, analyzed, and purchased technology services aligned to business needs.
- Implemented the company website using WordPress and a Linux LAMP stack.
- Oversaw and approved process documentation for nutritional supplement formulation workflows.

Developer

September 2019 - December 2020

INVID

- Developed full-stack features for a large-scale ecommerce platform using .NET and EPiServer CMS/Commerce APIs.
- Built backend features with C#/.NET and the EPiServer CMS and Commerce APIs, contributing to production-ready deployments.
- Collaborated with software teams to deliver client-focused solutions and strengthen production development practices.

Master Data Specialist

April 2018 - January 2019

Orvis V - Janssen, Gurabo

- Gathered requirements for an electronic forms system by analyzing paper forms and interviewing end users at the Janssen Gurabo facility.
- Designed and configured electronic forms and documented functionality in a Software Design Specification.

Undergraduate Research Assistant

August 2017 - June 2018

Polytechnic University of Puerto Rico

- Completed a research proposal on the design of a robot control system.

EDUCATION

Bachelor's Degree in Computer Science

Polytechnic University of Puerto Rico

Graduated June 2019 - Summa Cum Laude

Bachelor's Degree in Chemistry

University of Puerto Rico, Rio Piedras Campus

Graduated June 2013 - Cum Laude
